Brief IANA Update
RIPE 53 Plenary, Amsterdam 2006

John Crain
ICANN
Key points:

- Staff changes
- The usual graph
- Implementation of IPv6 Global Policy
- Storage format for registries
The IANA Staff

- Promotion of Michelle to IETF Liaison - yay!
- RIR Liaison to be filled.
Allocations of IP to RIRs

- RIRs have commented that ticketing requests give better feedback during the process
New IPv6 allocations for RIRs

- In accordance with the newly enacted global IPv6 policy
Regularising Registries

- IANA is undertaking a pilot project to convert registries’ *internal* format to XML.
  - protocol registries, number resource registries
  - not domain registries (a separate project is automating those)

- Ultimate aim is to allow *multiple formats* to generated
  - Legacy (txt), HTML, XML, CSV, JSON, whatever we are asked...
  - Syndication & History: RSS, Atom, diff files, mailing list notifications etc.

- Net result: better *machine readable* global IP registries
  (IPv4, IPv6, multicast, etc.)
Thank you for your attention!
