Executive Summary

This monthly report provides statistical information of IANA operations as they relate to the IETF. Also included are the deliverables for this reporting period in accordance with the SLA between ICANN and the IAOC with the effective date 1 January 2012.

Statistics

As outlined in the IETF–IANA SLA, IANA is tasked with collecting and reporting on IETF-related statistics.

Below you will find the list of statistics as requested by the SLA, a description of what queue’s statistics are being provided to fulfill that deliverable and an analysis of the data for each queue. The actual charts representing the data can be found at http://www.iana.org/reporting-and-stats/index.html.

This month’s statistics were generated through running scripts against a ticketing system log database. The charts were generated using java program using Jfreechart library.

The following types of charts have been defined for each queue for the reporting year 2012:

- Month to month comparison histogram of requests created/closed/open
- Month to month comparison histogram of age groups of closed tickets
- This month’s absolute age of closed requests
- Month to month comparison histogram of age groups of open tickets
- This month’s absolute age and current state of open requests
- Month to month comparison of mean, median and standard deviation for processing times of closed tickets
- Histogram for cumulative IETF requests for created/closed/resolved at the end of the reporting period and the year to date.

IESG approved documents (a)

Requests in the “drafts-approval” queue begin at the time IANA receives a notification of an approval or intent to publish a document and end when the RFC-Editor has acknowledged receipt of the notification of completed actions by IANA.

<table>

**Reference Updates (b)**

The requests in the “drafts-update-refs” queue begin at the time the RFC-Editor notifies IANA of the RFC number assigned to a document that had actions performed by IANA and ends with IANA updating all references to the document in IANA registries.

<table>
<thead>

<td>No Last Call for this IRTF document setting up 15 new registries.</td>
</tr>
</tbody>
</table>

**Media (MIME) type requests (e, f)**

IANA receives requests for registration of new Media types. Also received, but rarely, are modification and deletion requests for Media types. All of these are processed in the “iana-mime” queue. These requests begin with the receipt of an application for (or modification/deletion of a Media type and end with the request being resolved with a successful registration, removal or modification. In some cases the requests are closed due to withdrawal of the request by the requester or via administrative closure, typically due to lack of response from the requester. We understand that MIME Media types are currently referred to as just “Media Types.” The queue “iana-mime,” however, was named prior to this change.

**QUEUE: IANA-MIME**

<table>

</tr>
</tbody>
</table>

**New Port number requests (g)**

IANA receives requests for assignment of new user port numbers. These requests are processed in the “iana-ports” queue. Port requests begin with the receipt of an application for a user port number and end with the request being resolved with a successful registration, withdrawn by the requester, or administratively closed.
<table>
<thead>
<tr>

Modification to and/or deletions of Port number requests (h)

IANA receives requests for modification of existing port numbers. Also received, but are rare, are deletion requests. Both of these are processed in the “port-modifications” queue. These requests begin with the receipt of a modification (or deletion) request and end with the request being resolved with a successful modification (or removal) or closed due to withdrawal or administrative closure.
Tickets that required more IANA processing time than the SLA prescribes or that required more than 60 days of total processing time are described below.

<table>
<thead>
<tr>
<th>TICKET DETAIL</th>
<th>Status</th>
<th>Total Days</th>
<th>IANA Days</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>n/a</td>
<td>n/a</td>
<td>n/a</td>
<td>n/a</td>
</tr>
</tbody>
</table>

**New Private Enterprise Number (PEN) requests (i)**

All PEN (Private Enterprise Numbers) type requests are processed in an automated program that does not go through IANA’s ticketing system. The tool includes new, modification and deletion requests. The tool does not yet produce statistics similar to what is available for the other protocol parameter queues.

<table>
<thead>
<tr>
<th>QUEUE: PEN</th>

<th>18</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Total PENs deleted</td>
<td>0</td>
</tr>
</tbody>
</table>

**New IANA TRIP ITAD Numbers (k)**

IANA receives requests for assignment of new TRIP ITAD numbers. These requests are processed in the “iana-trip” queue. Requests begin with the receipt of an application for
a TRIP ITAD number and end with the request being resolved with a successful registration, withdrawn by the requester, or administratively closed.

<table>
<thead>
<tr>
<th>QUEUE: IANA-TRIP</th>

</tbody>
</table>

Requests relating to other IETF-created registries for which the request rate is more than five per month (I)

For those registries where there are more than 5 requests per month, IANA creates a separate queue for tracking those tickets.

<table>
<thead>
<tr>

<tr>
<td>CLOSED</td>
</tr>
</tbody>
</table>
Note: The IANA-PROT-PARAM queue is for all the miscellaneous requests that are not processed in a separate queue due to the lack of volume for any one type of request. These requests can be first-come first-served, expert review, IESG approval or another review method. In the SLA, processing goals are determined on the type of request. However, for this queue there is no separation of request type.

<table>

**Deliverables**

In accordance with the SLA, the IANA is reporting on the following deliverables due within five (5) months of implementation of the agreement for the reporting year 2012:

1) Provide publicly accessible, clear and accurate periodic statistics (continual)  
2) Track and publicly report on a monthly basis (monthly report - continual)  
3) Single points of failure documentation to IETF-IANA Working Group (continual)

**Provide publicly accessible, clear and accurate periodic statistics**

See “Statistics” section of this report and also http://www.iana.org/reporting-and-stats/index.html.

**Track and publicly report on a monthly basis (monthly report)**

The SLA describes 3 items IANA will provide monthly reports for. These items are outlined below along with a description of actions taken for each.

a. Resource allocation statistics as described in SLA item 2 of the Reports section

In item 2 in the Reports section of the SLA, there is a detailed list of statistics to be produced for the monthly report. The agreed upon partial statistics are found in the “Statistics” section of this report.

b. The utilization of all identified finite resources defined within IANA registries

The IANA is undertaking a project to review all registries to identify those that are finite and additionally those that are in danger of being exhausted. As of the end of this reporting period, no registries have been identified as being in danger of exhaustion. IANA will continue to report findings as needed.

c. Efforts that have addressed single points of failure/expertise (see item 3 in Services section of the SLA)

**Conclusions**

In May 2012, IANA cumulatively met 90% of the goal processing times over all requests. The staffing issues that IANA experienced in earlier reporting periods have been addressed and resulted in cross training that further strengthened the department’s ability to reassign tasks to meet the 90% target.
